Hello-

Please find here the following estimate to sand and restore @1,200 square feet of existing red oak hardwood flooring in your home. If you decide to stain the flooring, we will provide color samples on day one from which to make your selection of stain color. New quarter rounds to be installed. This estimate is based on not seeing the floors and not knowing the condition of the flooring once carpet is removed so we will assume here the floors are just in need of refinishing.

- 1) We will cover all cabinetry, shelving and counters with plastic and isolate them from the workspace and keep these areas clean. The main drum sander has a fine filtration bag for maximum dust capture. The secondary sanders are hooked directly to a high velocity vacuum system for maximum dust capture. We also deploy an air scrubber that constantly filters and circulates the air helping to remove dust and odors. We maintain a very clean work area and when we complete the job, we vacuum all flat surfaces including window sills.
- 2) We will remove all carpet, padding and associated materials and dispose of offsite. Customer to reimburse for disposal fee of around \$200.00.
- 3) All flooring will be sanded using a drum sander and will be sanded to bare wood starting with 36 grit paper and finishing with 80 grit paper. This machine will be set on a "lite" drum setting due to the floors being top nailed and we do not want to remove a lot of wood exposing the nails.
- 4) All edges will be sanded with an edger starting with 60 grit paper finishing with 80 grit paper.
- 5) All corners and detail work will be done with hand tools where hand sanders cannot fit.
- 6) All sanding and finishing around cabinetry will be done by hand so as not to disturb the finish on the cabinetry. We will be as careful as possible on all sanding aspects as to not to disturb the shoe molding or any other painted surface but, there will be some touch up here and there possibly.
- 7) After all sanding is completed, all wood surfaces will be fully buffed with 100grit paper for the final sanding prior to any finishing. This will make all grain similar and allow for a uniform coating of stain.
- 8) If staining, all flooring and will be stained by hand using traditional staining pads and the excess will be wiped off using lint free terry cloth rags. This will allow for a very even application of color across all surfaces. If we are not staining, we will start with step 8.

- 9) All wood surfaces will be first coated with Zinsser Sander Sealer as the first coat. This will add color to the floor and provide a barrier between the stain color and the polyurethane and promote better build coats of polyurethane.
- 10) For the second and third coats, we will apply two coats of Bona Traffic Go brand water based polyurethane in a sheen yet to be selected. Between the second and third coats all surfaces will be polished with 220 grit paper to achieve a very smooth surface prior to the final coat. I recommend a stain or matte finish as they hold up the best. This is the best water based finish available and it is extremely durable with no smell, one hour dry time and fully cured in 24-36 hours.
- 11) Install new matching or primed white wood quarter round around the perimeter of the rooms.
- 12) Clean up work area, remove plastic and all debris.

Pricing - Refinishing of Flooring - Natural \$6,720.00

Refinishing of Flooring - Stained \$7,920.00

Carpet removed at \$1-\$1.50 per square foot depending upon difficulty of demo

Quarter round billed at \$2.75 per linear foot after install is completed.

Thank you again and if you need anything further, please just ask. With 33 years experience and a crew that has been with me for years, you'll get a perfect job!

Best,

Henry Wisch
